

DENTAL IMPLANTS

WHAT ARE DENTAL IMPLANTS?

A dental implant is the closest thing to a natural tooth; it is a small titanium screw placed into your jaw where you have a missing tooth. This will act as an artificial root. Once the implant is in place, we attach a crown to the implant, giving you a natural-looking tooth where you once had an unwanted gap.

WHY HAVE DENTAL IMPLANTS?

Missing teeth are no fun! This can have a substantial effect on your appearance, which can impact your self-confidence, and it can also affect the functionality of your mouth; for example, if you favour chewing on one side of your mouth due to missing teeth, it can cause problems with the muscles in your jaw, and this could lead to headaches, facial pain, jaw clicking and pressure behind the eyes.

Dental implants also offer more stability than other gap replacement options. This additional stability means you can still enjoy all your favourite foods without any worries.

DENTAL IMPLANTS

STRAUMANN

At our dental practice, we only use the best clinically proven products, which are underpinned by years of clinical research. Straumann uses the best materials and advanced technology to provide the best results. Straumann implants provide optimum standards of functionality, increased comfort and enhanced aesthetics. Straumann implants stand above any other implant for the following reasons:

- Optimum integration with oral tissues
- The quick and simple treatment process
- Quick healing
